Exercise 1

Download from GitHub the data file by clicking on this link: Example_5.xls. Open it in Excel and figure out which sheet of data we should import into R. At the same time figure out how many initial rows need to be skipped. Import the data set into a data frame and show the structure of the imported data using the `str()` command. Make sure that your data has $n = 31$ observations and the three columns are appropriately named. If you make any modifications to the data file, comment on those modifications.

```
# Load in libraries

library(tidyverse)
library(dplyr)
library(readxl)
```

```
data.2 <- read_excel('../raw_data/Example_5.xls',sheet=2,range="A5:C36")

#data.2 <- data.2 %>% select((1:3)) %>% slice(-(1:4))
#colnames(data.2)<-c("Girth","Height","Volume")
#str(data.2)

head(data.2)
```

```
## # A tibble: 6 x 3
##   Girth Height Volume
##   <dbl>  <dbl>  <dbl>
## 1   8.3     70   10.3
## 2   8.6     65   10.3
## 3   8.8     63   10.2
## 4  10.5     72   16.4
## 5  10.7     81   18.8
## 6  10.8     83   19.7
```

Exercise 2

Download from GitHub the data file by clicking on this link: Example_3.xls. Import the data set into a data frame and show the structure of the imported data using the `tail()` command which shows the last few rows of a data table. Make sure the Tesla values are `NA` where appropriate and that both `-9999` and `NA` are imported as NA values. If you make any modifications to the data file, comment on those modifications.

```r
## Excersise 2

data.3 <- read_excel('../raw_data/Example_3.xls', sheet=2, range="A1:L34", na=c('NA',-9999))

#data.3 <- data.3 %>% select((1:12)) %>% slice((1:33))

#data.3<- data.3%>%mutate(drat=if_else( drat==-9999,NA,drat),
#                         cyl=if_else( cyl=='NA',NA,cyl),
#                         disp=if_else( disp=='NA',NA,disp),
#                         vs=if_else( vs=='NA',NA,vs),
#                         carb=if_else( carb=='NA',NA,carb))

tail(data.3)
```

```
## # A tibble: 6 x 12
##   model          mpg   cyl  disp    hp  drat    wt  qsec    vs    am  gear  carb
##   <chr>        <dbl> <dbl> <dbl> <dbl> <dbl> <dbl> <dbl> <dbl> <dbl> <dbl> <dbl>
## 1 Lotus Europa  30.4     4  95.1   113  3.77  1.51  16.9     1     1     5     2
## 2 Ford Panter~  15.8     8 351     264  4.22  3.17  14.5     0     1     5     4
## 3 Ferrari Dino  19.7     6 145     175  3.62  2.77  15.5     0     1     5     6
## 4 Maserati Bo~  15       8 301     335  3.54  3.57  14.6     0     1     5     8
## 5 Volvo 142E    21.4     4 121     109  4.11  2.78  18.6     1     1     4     2
## 6 Tesla Model~  98      NA  NA     778 NA     4.94  10.4    NA     0     1    NA
```
